

O'Neill Healthcare
Enhancing Quality of Life, Since 1999

Introducing the revolutionary

Ampcare ESP Kit

*For improved quality of muscle contraction and
swallowing function.*

O'Neill Healthcare
Enhancing Quality of Life, Since 1999

What is ESP?

ESP™ (Effective Swallowing Protocol) is a non-invasive, CE marked treatment for dysphagia that combines the most effective electrical stimulation parameters with resistive exercises.

It elicits the most comfortable motor contractions by stimulating inactive or atrophied swallowing muscles.

The result is improved quality of muscle contraction and swallowing function.

How Does ESP Work?

Combining neuromuscular electrical stimulation with resistive swallowing exercises and postural strategies, ESP works by achieving the following:

- Movement of the airway out of the food's pathway
- Stimulation of fast-twitch, powerful muscle fibers to elicit motor contraction
- A 30-minute treatment time, providing 60, 72, or up to 90 swallowing attempts
- A safe, effortful swallow
- Decreased risk for aspiration

Availability

ESP Kit

Includes:

- ES™ Unit
- Restorative Posture Device
- 10 Packages of E Series

ES™ Unit

Includes:

- ES™ Unit
- 10 Packages of Electrodes Included

Please note: Purchase of the ESP Kit requires completion of Ampcare's online training course.
